

## ACTAtek - IP Reader

### Recommended for Card Access

ACTAtek External IP Smartcard Reader is a cost effective solution for access control and time attendance product which allows users to access its record from anywhere, at any time, and on any platform.

The IP Card Reader was designed to extend access control from an ACTAtek to an additional, smaller card access control system. It is compatible with any other model but being networked with a main ACTAtek is not required. While having an ACTAtek is not required it is suggested for easy card enrollment. Registration and card writing is via the master ACTAtek Unit. Cards registered via the master ACTAtek unit will be immediately readable at any readers which were registered with Access Manager. Once registered a user will be given access to secured areas with a swipe of a card.

The IP Card Reader is available in Mifare, EM, HID, HID iclass, or Hybri card options. This reader has full relay output ability to operate door control handled with a door strike or magnetic locking device.

4 access levels:

**Personal User:** The personal user login only allows for users to check their attendance records, and view their reports. No changes or modification is admissible through this configuration option. This is for employees who wish to check their attendance records or other reports generated by the system.

**User Administrator:** The user administrator access level lists a different set of configuration changes that can be made. The changes can be made to Access levels of different departments, addition, and monitoring of job functions, reporting, as well as, managing the employee list. Addition / deletion of employees, restricting access to rooms for different employees can also be done by the user administrator.

**Network Administrator:** The network administrator is in charge of system configurations, such as, networking settings, terminal settings, clock setups, or password setups. Everything that involves technical knowing will be done by the network administrator. This role is usually assigned to a tech savvy person who is capable of making appropriate configuration changes and has basic knowledge of networking setup and IT-related issues.

**Super Administrator:** The super administrator login combines the functions of 1 - 3, so the administrator is in charge of the whole system, including technical and administration functionalities.
