

### ACTAguard – Product Overview

#### Recommended for Outdoor installations

ACTAguard is designed and manufactured to protect the ACTatek door access control device from sun, rain, and vandalism. While the Actatek is designed as an all-weather device, forces of nature may limit its full life span. The ACTAguard protects your investment from Mother Nature and vandals. An opening at the bottom allows the user to easily place their finger on the sensor or use a card or fob to gain access making it the most suitable cover for outdoor use.

#### Outdoor Use

Some of the most popular uses for the ACTatek access control device are to provide access to fitness centers, daycare centers, schools, businesses, and manufacturing. While many businesses use the Actatek device in areas that are within a building, the most common use is for exterior entrances into a secure facility. When rain, snow, or intense sun are found in these locations, the ACTAguard provides great protection from tampering and the outside elements. The Actaguard is heavy duty and will not rust or fade over time. We are proud to claim that the Actaguard is made and assembled in the USA.

### What is the ACTAguard?

The ACTAguard is a weather resistant, heavy duty stainless steel enclosure with a lexan window used to protect the ACTatek from vandalism and harsh environments.

#### ACTatek Access Control System

The ACTatek provides security to entrances of businesses and increases security for the most sensitive areas of a facility. Using a fingerprint, smart card or proximity card, fob, pin code, or combination of these to gain access to a secured area to protect your assets and your staff. Having over 85,000 units installed today and over 10 years of experience makes the Actatek a best of breed in the access control and time attendance markets today.
