

# Security for your Day Care

**Do you need door access that is impressive, and most importantly provides the best security for your children?**

Suprema Products provide all this and more. Be ready to enroll more children into your day care facility with Suprema in place. A product that pays for itself.

## Parent Security

Security is a top concern for all parents when deciding on which day care facility to send their children. Biometric door access control provides an easy and safe way to give only parents access to the facility. When access is given through fingerprint authentication, complete control is provided over who comes in which doors, and at what times and days. Your child's safety is never compromised. An audit trail and optional photograph of who came in and when is automatically recorded.

## Owner Benefits

With Suprema door access in place, parents and owners are at ease with not only security, but with other features that go along with the technology. Owners can then use the product to clock employees in and out, eliminating "buddy" punching as well as easily completing time and attendance reports right from a web server. Without installing any software, the optional Web Based interface allows you to easily enroll and manage parents and staff. Set up is done either straight from the unit itself or from a desktop device.

# Suprema Access Control Saving with Convenience & Ease

Left to Right: BioLite Net, BioStation T2, BioEntry Plus

## BioLite Net

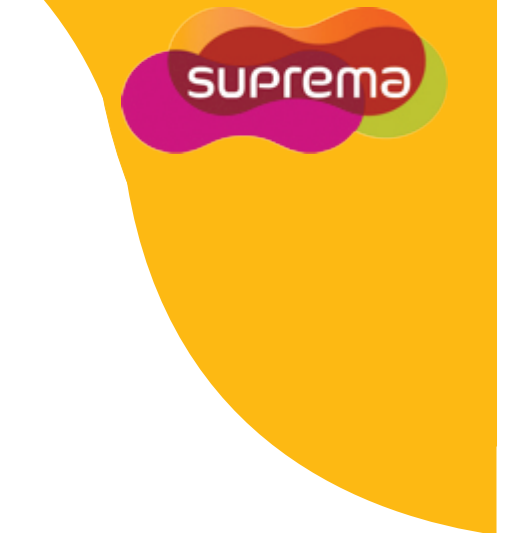

With its slim and sleek design, the BioLite Net is rated for both indoor and outdoor use. This unit is perfect for any main entrance to offer access through fingerprint, pin or card authentication.

## BioStation T2

Having superior qualities, the BioStation T2 allows for web based management to control all Suprema units in your building. Used to provide not only authentication through fingerprint, card, and pin, this unit has a secondary use as a video phone intercom system.

## BioEntry Plus

Perfect for internal security, the BioEntry Plus allows for access through fingerprint or a card. Simplistic, yet elegant.

## Features

- Allows access via fingerprint, code or smartcards, fob's or any combo of these.
- Set each user or whole group of users' access schedule by date and time.
- Automatically records when users have accessed the facility.
- All features and functions can be controlled from an office, home PC and even from some smartphones.
- Users can be remotely enrolled from a PC and automatically uploaded to all units.

Suprema Products can be mixed and matched throughout a facility to meet the security needs of each individual area, while still being able to control all through one system. Ideal for child care facilities where security matters!
